

IntegrationMan

Perfectly integrates SAP and nonSAP

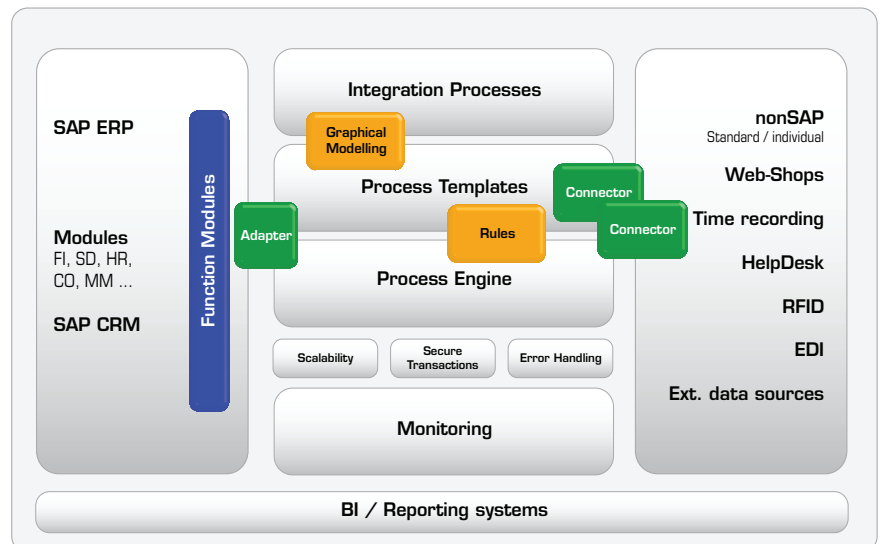

In times of consolidation and globalization, how consistent processes are and how well communication flows between various systems are increasingly becoming factors of success for companies.

IntegrationMan from HONICO eBusiness GmbH offers a combination of predefined SAP function modules, process templates, and a proven integration platform for communication between SAP and non-SAP systems.

Interaction and homogeneity of the individual modules are a key added value for automating your business processes. Shorter process runtimes, fewer manual interventions, and error source reductions improve the quality and are advantageous for time and costs required.

Low TCO and a swift ROI were at the forefront when IntegrationMan was designed. The best practice approach with preset process templates and function modules increase productivity in implementing integration projects. IntegrationMan's parameterizable components and graphical configuration interface are essential components here.

Investment protection and flexibility are important decision criteria for integration solutions for communication between SAP and non-SAP systems. IntegrationMan ensures this with the certified SAP Adapter, a scalable process engine and the adaptation of the SOA concept. Of course, our advanced solution supports all customary industry standards, such as WebServices, XML etc.

IntegrationMan's sophisticated architecture includes functions that communicate with SAP using the SAP Java Connector JCo, based on BAPIs and IDOCs. Comfortable data mapping, rules for process control of process flows, and paths of communication are configured using the graphical interface. Monitoring functions, error handling, and transaction control round off this consistent architecture.

Connect your SAP

In order to guarantee best integration possibilities, we cooperate with renowned partners.

- » IBM WebSphere Commerce (Professional / Express / Enterprise)
- » ePages 5 Merchant Enterprise
- » prioins benavit

Key functions and advantages

Function	Advantage
Preset process templates and function modules – Best Practice	Increased productivity and swift implementation
Graphical user interface to model business processes and configure rules	Swift reaction to changing demands on business
Support for all customary industry standards, such as WebServices, XML etc.	Protects investments and minimizes risk
Certified SAP Adapter and wizard-supported connectors	Comfortable link to various systems
Monitoring, error handling and transaction control	Ensures operational safety and a high degree of transparency
Scaleable process engine	Simple access and flexible growth

IntegrationMan supports the following technologies

Technology	Support
Platforms	Windows, Linux, Unix, System i
Databases	Oracle, MS SQL-Server, DB2, DB2/400, Pervasive SQL, My SQL, ODBC
Communication standards	HTTP/S, FTP, POP3, IMAP, MAPI, SMTP, SNMP, WebServices (SOAP, WSDL), XML, ASCII (csv, Text)
SAP Connectivity	SAP Java Connector JCo (RFC / BAPI and IDOC)
